

IT'S A DIRTY JOB, BUT SOMEONE'S GOT TO DO IT.

Hardware

On really big jobs in which vast amounts of dust are emitted, you may sometimes need to supplement your dust collector with a pre-separator. A pre-separator connected to the dust extractor gives a substantial increase in the suction capacity. In addition, the ability of the dust collector is broadened so that it can deal with materials that would usually be difficult to handle, such as soot, glowing particles, liquids and large quantities of light-weight materials. Our pre-separators are often used for

- Refurbishment, rebuilding and extension work
- Increasing the capacity when sanding floors
- Handling large quantities of lightweight materials

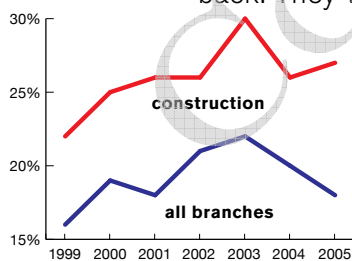

C-line pre-separators arrest up to 80 - 90% of the extracted material before the air reaches the dust separator. Depending on the task, you can select between two different types of pre-separator: cyclone collector or receiver separator.

Software

All of our machines are designed so that they are simple to use and service, without harming your thumbs, arms and back. They will not expose you to unnecessary dust or high noise levels. They are user friendly machines that save time, money and reduce sick leave. Many call this ergonomics, but we also call it good economics.

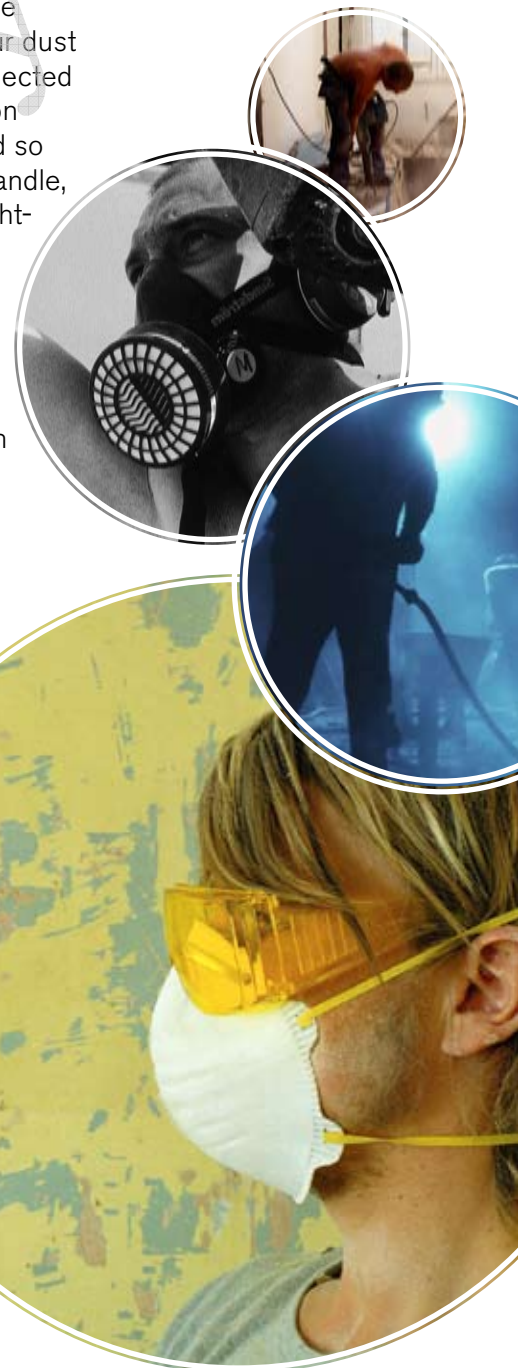

The proportion of occupational illnesses in the building industry is still much higher than it is in other industries. We regard it as a challenge to help lower these figures.

We think of you when we design our machines.

Proportion of employed men who have stated to have suffered occupational illness problems.

C1300

A 35 litre pre-separator with built in vacuum equalizer for use with a plastic bag.

C1500

A suction barrow that is especially designed for renovation work and comes equipped with a front cover for loading coarse material that cannot be vacuumed up.

C3000

A pre-separator equipped with Longopac® for separation of large quantities of dust.

C5500

The C5500 is the series largest pre-separator. Suitable for working together with PullmanErmators largest dust extractors. Longopac® for separation of large quantities of dust.
